XR-1500

Manufacturer information

Sysmex Corporation

Summary

The XR-1500 is a combination of a single-unit flagship XR-Series haematology analyser with the SP-50 slide preparation unit. Both modules are seamlessly interconnected by a single sampler, creating a compact, integrated workstation that allows fully automated processing of your blood samples and provides you with stained blood smears of consistently high quality.

Additionally, with an onboard rule set, the XR-1500 automatically initiates the production of peripheral blood smears for samples that require one.

SP-50

As part of the XR-1500, the Sysmex automated SP-50 standardises and accelerates the complete slide preparation and staining procedure. With an intelligent wedge method allowing user-definable settings for sample volume, speed, waiting time and angle of the spreader blade, the SP-50 also auto-adapts to the haematocrit value of each blood sample.

Staining results are optimised using a variety of Sysmex and RAL Diagnostics reagents specifically adapted to and manufactured for the SP-50. The SP-50 comes in two throughput configurations – SP-50 (standard) and SP-50 (high throughput), so you can opt for the model that fits your smear review rate.

Workflow automation

- Fully automated workflow from cell counting to staining without manual intervention. Decreased TAT by minimising manual work steps, such as sorting samples for reflex testing.
- High-quality blood smears through the automated adjustment to the haematocrit of the eight different levels.
- Rerun & Reflex ensure that samples for which the analyses must be repeated or extended are selected automatically.
- Micro samples and Raised Bottom Tubes can be used without sample dilution ensuring the minimisation of biohazard procedures.

Diagnostic support

- Advanced analytical capabilities are standard, such as nucleated red blood cells (NRBC) included in every complete blood count, and Immature granulocytes (IG) with every WBC differential.
- Consistent slide preparation and stain quality support the microscopic examination or digital imaging of peripheral blood smears.
- A wide range of optional analytical applications are available, depending on your specific requirements.

Configurations
